Professional Summary

Final-year B.Tech student specializing in Embedded Systems and IoT with hands-on experience in real-time microcontroller-based solutions. Skilled in Arduino-based system design, sensor integration, and IoT platforms such as Blynk, with foundational exposure to computer vision using YOLO. Strong programming background in C, C++, and Python, supported by internship experience in embedded systems and web development.

Technical Skills

Languages: Python, C, C++, SQL, HTML, CSS
CS Fundamentals: Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), DBMS, Computer Networks, Operating Systems
Embedded & IoT: Arduino, Blynk, Sensors, Microcontroller Programming
Automation & Vision: OpenCV, n8n Workflow Automation
Tools & Databases: Git, GitHub, VS Code, Arduino IDE, MySQL
Professional Skills: Teamwork, Communication, Problem Solving, Time Management

Internships

Embedded Systems Developer Intern – Microchip (via Eduskill) Jun 2024 – Oct 2024
– Executed microcontroller programming for GPIO interfacing and peripheral control on three hardware components.
– Outlined embedded system concepts to enhance the functionality of prototype-level applications used for training.
– Performed debugging and functional testing to verify correct system behavior.

Web Development Intern – OneStars Feb 2025 – Mar 2025
– Improved responsive web pages across different screen sizes using HTML, CSS, and JavaScript.
– Detailed user interface enhancements to improve readability, navigation flow, and layout consistency.
– Used Git-based version control to manage iterative code updates during development cycles.

Projects

Hardness Detection System (Industry Sponsored Project) — Python, OpenCV Jul 2025 – Nov 2025
– Developed an image-processing system to detect indentation marks from hardness test images and calculate Brinell Hardness (HBW) values.
– Computerized result annotation and hardness value computation to reduce manual inspection effort and improve consistency in quality analysis.
– Implemented manual measurement support to validate results and improve reliability under varying image conditions.

IoT-Based Soil Moisture Monitoring System — Arduino, Sensors, Blynk Jan 2025 – Mar 2025
– Enhanced an IoT-based monitoring system to collect and display real-time soil moisture data.
– Applied Blynk integration to visualize sensor readings and monitor system status remotely.
– Enforced threshold-based irrigation logic to control water pump operation automatically.

n8n Workflow System — n8n, Docker, APIs Aug 2025 – Oct 2025
– Designed and systematized workflow pipelines using n8n deployed via Docker for task orchestration.
– Integrated Airtable and Discord APIs to enable real-time order tracking and notification delivery.
– Computerized reporting processes to reduce manual tracking and improve workflow reliability.

Certifications & Achievements

Certifications
– Python Programming – Great Learning
– Embedded Systems Developer – Microchip (Eduskill)
– Introduction to Programming – Kaggle
– Oracle AI Foundations

Achievements
– C++ Silver Star – HackerRank
– Secured 1st Rank in Innovation Prototype Competition, ADCET (2023)
– Solved coding problems on LeetCode, CodeChef, and HackerRank

Education

B.Tech (CSE – IoT & CSBT) – Annasaheb Dange College of Engineering & Technology, Ashta CPI: 7.59 — 2026
HSC – Modern Education Society, Vita 84.33% — 2021
SSC – Modern Education Society, Vita 83.20% — 2019
